

ANACHARIS

PondAcademy.com

Full Sun to Partial Shade

Size - 10 ft spread (3m)

Blooms Typically June to August

USDA 5-11

Submerged

Care Tips

Prevent overgrowth by pruning the plants or pulling them entirely. The latter is advisable in cases where there's no animal life, such as pond fish, to regulate the growth. If your pond is susceptible to freezing beyond surface ice formation, it is better to trim multiple stems at least 8 inches in length. You can leave these clippings submerged in a tub with minimal light (2 watts per gallon in the case of aquariums) or keep them indoors floating.
