

# HORNWORT

PondAcademy.com

 Full sun to Full Shade

 Size - Grow up to 10 ft.

 Early June through late August

 USDA Zone 5 - 11

 Submerged pond plant

## Care Tips

Regularly trim to keep at desired size. Remove and properly discard any clippings away from the water. Hornwort may lose needles during the first couple of weeks after planting, so you may need to remove the debris from your pond or clean your filter more often. To overwinter in colder climates, take the plants indoors and allow them to grow in an aquarium or tub (ensure they get ample light). Or simply allow them to die off and replant in Spring.
