

LEMON BACOPA

PondAcademy.com

Full sun to partial shade

6+ inches tall with 2 foot spread

Early April through late September

USDA Zone 6 - 11

Marginal/bog plant

Care Tips

Regularly trim to keep the plant your desired size. Remove and properly discard any clippings away from the water. Lemon Bacopa does not require any special fertilizers. It will not survive in an outdoor pond during winter in colder climates. Before the first frost hits, move indoors and allow to grow in an aquarium or tub (ensure they get ample light). Or simply allow them to die off and replant in Spring.
