

LILY PADS

PondAcademy.com

 Full sun to partial sun

 Size - Varies

 Spring to Frost

 USDA 4-11

 Floating plant

Care Tips

Trim or prune the leaves and flowers when they turn yellow or brown. Remove all the trimmed parts completely from the water. Your water lily will keep growing all season long with regular fertilization. For winter care, trim plants in planting containers or plant shelves down to 1-2 inches and lower them into deeper water. Bring them back up once the ice has thawed and before there is any growth. Leave your lily pads as-is during winter in zones 6 and warmer.
