

# PAPYRUS

PondAcademy.com

 Full Sun to partial shade

 Dwarf: up to 24", Giant: up to 8'

 Mid to late summer

 USDA 8-10

 Tropical bog plant

## Care Tips

Always trim or prune the stems once they start turning yellow or brown. Detach and discard the pruned parts to minimize the amount of excess organic material in your pond or water garden. To overwinter, in Zones 10 and higher, trim to 2-3 inches above the water. The plant will resume growing when spring arrives. In Zone 9 and lower, remove from the pond at the end of the first frost and discard. Alternatively, move indoors ensuring they are always wet.
