

PARROT'S FEATHER

PondAcademy.com

 Full sun to partial shade

 Can reach up to 60" tall

 Typically through summer

 USDA Zone 6 - 11

 Marginal pond plant

Care Tips

Parrot's Feather is a fast grower and will require regular trimming to prevent it from choking out other plants in your pond. Remove and properly discard any clippings away from the water so they don't decompose in your pond and potentially cause water quality issues. You can slow their growth by planting them in pots or in shady areas of your pond. Parrot's Feather is a hardy plant and will typically overwinter in your outdoor pond without a problem.
