

# TARO

PondAcademy.com

 Full sun to partial shade

 Size - 24" spread, 4" feet high

 Summer - Typically June to August

 USDA 8-11

 Bog plant

## Care Tips

It is best to prune or trim the stems once they start turning yellow or brown. Remove and discard the detached parts completely to minimize the amount of excess organic material in your pond. During winter, remove the tropical bog plants from the pond and replace them the following season. Alternatively, you can remove and relocate them to a warm indoor space.
