

UMBRELLA PALM

PondAcademy.com

Full sun to partial shade

Size - Grow up to 5 ft. tall

Bloom July through August

USDA Zone 8 - 10

Marginal/bog plant

Care Tips

Umbrella Palm plants require very little maintenance if you plant them in potting containers (which will help control their growth). You will still need to trim their roots from time to time by removing the aquatic pots from your pond, removing the plant from the pot, and using a handsaw to cut the root ball in half (or dividing the plant into two). Umbrella Palm is not cold-hardy, so it must be brought indoors and placed near a window to receive sunlight.
