

VALLISNERIA

PondAcademy.com

Full sun to partial shade

Size - Grow up to 36"

Blooms July through September

USDA Zone 4 - 10

Submerged pond plant

Care Tips

Vallisneria is extremely easy to take care of, only requiring regular trimming of the stolons to keep it at your desired size. Be sure to remove and properly discard any clippings away from the water so they don't decompose in your pond and potentially cause water quality issues. Vallisneria can be left in the pond over winter, as it will simply die down to the tubers and grow back in Spring.
