

WATER IRIS

PondAcademy.com

Full to partial sun

Size - Grow up to 24"

Blooms May through July

USDA Zone 5 - 9

Marginal/bog plant

Care Tips

Thrives best with regular applications of aquatic fertilizer during the Summer months. Regularly trim any dead foliage and properly discard any clippings away from the water. Regularly inspect your Water Iris plants for bugs and pests to prevent them from infesting your colony of plants. In Fall, cut off any dead foliage and trim the plant to 1-2" above the water line. Water Iris will overwinter just fine in your pond. In Spring, the plants will begin growing again.
