

WATER LETTUCE

PondAcademy.com

 Partial to full shade

 Size - 12" spread

 Blooms late Summer to early Fall

 USDA 9-11

 Floating plant

Care Tips

Prune or trim the flowers and leaves once they start turning brown or yellow and discard them outside of your pond. Water Lettuce does not require fertilization to reproduce – all the required nutrients come from the excess nutrients in the pond water. Water Lettuce struggles with freezing temperatures or cold water, with the leaves turning white before rotting. So, if you are in Zones 8 and lower, discard your Water Lettuce at the end of the first frost.
